Vanda family

The former Ascocentrum, Aerides, Renanthera, Rhynchostylis and their intergeneric hybrids need bright light (same as Cattleya). They can go outside into dappled shade late May to Sept.

Temp : 55-100˚F (12-38˚C)

Water : Should never go dry, DRENCH while still moist.

Fertilizer: Prescribed dose every 2-3 weeks

Can be grown same as the true Vandas.

At Fair Orchids we use net pots (3” & 4”) and Vanda baskets (6” & 8”) with sphagnum/bark mix (4:1).

In summer we water twice a week, in winter once a week.
